

EVSE charging
station testing
service

EIS provides an EVSE charging station testing service onsite by trained professionals using industry leading test equipment.

EV charging stations, like any other electrical appliance require testing to ensure they are working correctly and safely. Issues that may arise from a faulty charging station could result in costly damage to the electronics and batteries that power your EV. Not to mention the possibility of serious harm to the user.

At EIS we provide an end-to-end testing and certification service for electric vehicle supply equipment [EVSE] including home and public charging stations.

For a seamless charging experience and to ensure the electrical safety of all users and equipment contact EIS to schedule this service.
