

Experience peace of
mind with IQP
inspections.

What is IQP? It stands for Independent Qualified Person, your trusted partner in ensuring your electrical systems meet the highest safety standards. In New Zealand, IQPs are authorised to inspect crucial systems like:

- **Building Inspections:** Performing comprehensive inspections of electrical systems within buildings to ensure they meet regulatory requirements and safety standards.
- **Verification of Compliance:** Inspecting various building components such as emergency exits & emergency lighting to verify that they comply with relevant regulations and codes.
- **Documentation and Reporting:** Maintaining documentation of inspections, recording any issues identified and preparing reports for both regulatory agencies and building owners.
- **Client Communication:** Engaging with building owners, property managers, and tenants to address concerns, offer guidance on compliance issues, and facilitate essential actions.
- **Training and Education:** Providing training and educational workshops for building staff and occupants regarding safety protocols, emergency procedures, and regulatory compliance requirements.
- **Periodic Reviews and Audits:** Performing periodic assessments and audits of electrical building systems and documentation to identify areas for improvement and ensure continuous compliance.
- **Risk Management:** Evaluating potential risks to electrical building safety and developing effective strategies to mitigate these risks.

Why are IQP inspections important? They're your safeguard against potential risks. By ensuring compliance with regulations and standards, IQPs promote safety for everyone who steps foot on your premises.

What do IQPs do? They meticulously inspect, test, and certify systems to ensure they function flawlessly. With regular inspections, typically annually, managers stay ahead of any potential issues.

What happens after an inspection? You receive detailed reports outlining the condition of your systems and any necessary maintenance or actions required. It's all about proactive maintenance, ensuring ongoing compliance and safety for all.
