

Upskilling for Domestic and Commercial trained electricians

EIS predominantly works in the industrial field undertaking projects and maintenance work for a range of different clients in the many exciting sectors. We perform high-quality installations and provide our clients with quality, results, and peace of mind.

EIS has a proven health and safety record, and we pride ourselves on our focus on making sure that our people go home safe every day. We also have an EAP (Employee Assistance Program) that allows you free access to many specialists should you need to discuss any issue in your life.

Looking after our people is our number one priority.

EIS provides on the job training for qualified electricians from the domestic and commercial sector who would like to upskill to the industrial sector. It can take 6-12 months to learn the basics and gain a good understanding of the industrial requirements. Electricians are buddied up with a more experienced industrial electrician for the first 6-8 weeks and provided continual training and mentorship.

One of our team members, Martina, who has upskilled from commercial to industrial at EIS has highlighted some of the benefits:

- The work is easier on your body, no scrabbling around in ceilings or under floors where you are constantly on your knees and straining yourself.
- Health and safety standards are higher, reducing risk of incidents and with PPE readily available.
- Wages are generally higher.
- There can be flexibility in your day.
- A vehicle is supplied including personal use provision.
- The work in this sector is interesting and will provide many challenges including problem solving, fault finding along with huge job satisfaction.

Join Martina and get yourself on a pathway that can lead you anywhere in this industry!

If you have the right attitude and are keen to learn, please contact us for more information or apply to catherine.frost@eis.co.nz.
